Education

2025 - Present

Bachelor of Science - Mathematics & Statistics

University of South Africa

2024

BCom Information Systems & Computer Science

University of Cape Town

2018

National Senior Certificate

Khanyisa Education
Centre

Certifications & Awards

- Microsoft Power BI Data Analyst Associate
- 1st Place - IITPSA SIGCyber Challenge
- Young Economist of the Year 2019
- Top Achiever - GPA 75%

Skills

BI & Visualisation

- Power BI (Certified)
- Looker Studio
- Tableau

Data & Cloud Platforms

- Snowflake
- Google Cloud Platforms (GCP)
- Google BigQuery
- SQL Server

Programming

- SQL
- Python
- Java
- C#
- HTML / CSS

MPFUNO CLYDE BILANKULU

Junior BI Developer and Data Engineer with 2+ years of experience designing and building scalable data pipelines and ETL solutions across cloud platforms, including Google Cloud Platform (GCP) and Snowflake. Proven expertise in data warehouse design, ETL optimisation, real-time analytics pipelines and enterprise migrations. Skilled at translating business requirements into technical solutions and collaborating with cross-functional teams. Certified in Power BI with strong foundation in SQL, Python and cloud automation. Seeking to deepen GCP expertise and contribute to advanced data engineering initiatives.

Experience

| PSG Asset Management

2025 Nov - Present

Junior Business Intelligence Developer

- Leading an independent, end-to-end migration of the on-premises data warehouse to Snowflake. Ensuring data integrity and zero downtime during transition.
- Designing and building scalable ETL pipelines using enterprise integration tools to migrate and restructure financial data, applying data warehousing best practices and query performance optimisation/tuning techniques.
- Writing and maintaining complex SQL and scripting solutions to transform, validate, and load data within the cloud platform, resolving data quality issues and improving pipeline reliability.
- Managing sprints, backlog, and version control for all developed code via DevOps platforms, ensuring structured delivery and traceable change management.
- Identifying and implementing optimisation opportunities across data flows, reducing redundancy and improving query performance.
- Implementing data quality frameworks and governance practices to ensure data lineage, metadata accuracy, and compliance across cloud data infrastructure
- Preparing to support BI dashboard development and reporting delivery post-migration, leveraging certified BI skill set.

2025 Jan - Oct

Junior Data Engineer

| Incubeta

- Gathered and documented business requirements for data solutions and translated stakeholder needs into technical specifications for ETL pipelines and analytics dashboards deployed on GCP.
- Executed multiple migration projects moving company data from on-premises systems to Google Cloud Platform, utilizing Google Cloud Storage for data lakes and BigQuery for analytical data warehouses; ensured data integrity and optimized query performance.
- Led dashboard migration initiatives transitioning legacy spreadsheet-based reporting to modern cloud BI platforms on Looker Studio (GCP's native BI platform), improving accessibility and enabling real-time data visibility for stakeholders
- Managed and optimized ETL processes on GCP for real-time marketing analytics, implementing data pipelines that fed into Looker Studio dashboards and Google Analytics 4 reports
- Built and maintained cloud-based dashboards in Looker Studio and Power BI; supported UAT (User Acceptance Testing), validation, and deployment against client requirements
- Implemented real-time data tracking and collection on Google Cloud Platform using Google Tag Manager (GTM) and Google Analytics 4 (GA4) integrated with GCP backend systems to enable comprehensive marketing analytics
- Designed and optimized BigQuery schemas implementing dimensional modeling (star schema) for efficient querying and cost optimization in BigQuery data warehouse
- Participated in post-release monitoring of GCP data pipelines, identifying bottlenecks and proposing performance improvements

ETL & Data Intergration

- Talend
- Fivetran
- Adverity
- DBT
- SSIS
- Google Tag Manager (GTM)
- Google Analytics 4 (GA4)

DevOps & Automation

- Azure DevOps (Git + Boards)
- CI/CD Pipelines (Github + GCP)
- Git version Control

Methodologies

- ETL / ELT
- Agile / Scrum
- SDLC
- PMBOK

2024 Jan - Dec

Data & Analytics Intern

| Incubeta

- Conducted requirements gathering with cross-functional teams for tracking and data metrics to be processed on Google Cloud Platform
- Implemented and tested data tracking using Google Analytics 4 (GA4) and Google Tag Manager (GTM) integrated with GCP infrastructure; created process maps and documentation of data flows and analytics requirements
- Participated in QA and validation of dashboards on Looker Studio and presented reports to internal and client stakeholders, ensuring data accuracy and alignment with business requirements

2023 Jan - Dec

Information Systems Tutor

| University of Cape Town

- Tutored students in Commercial Programming and Systems Design & Development, reinforcing foundational computer science concepts

Projects

CI/CD Automation - Web Application Deployments | Personal

- Built CI/CD pipelines integrating automated testing and deployment workflows, reducing code deployment time from manual processes to seconds and accelerating iteration cycles by 10x when pushing applications to cloud infrastructure via GitHub.
- Gained practical hands-on experience in release automation, test-driven deployment, and DevOps best practices applicable to production environments.
- Cloud Platforms Used: GCP Cloud Run, Cloud Build, Container Registry, Cloud Storage, Bigquery

GitHub Portfolio Dashboard | Personal 2025

- Designed and deployed a Streamlit web application that aggregates and visualizes my GitHub project portfolio data with a user-friendly interface. Implemented intelligent caching architecture using BigQuery as primary data store to work around GitHub API rate limits while maintaining free-tier cost efficiency and cache optimisation on streamlit.
- Built containerized application using Docker and deployed to GCP Cloud Run for serverless compute
- Implemented CI/CD automation pipeline (GitHub Actions + Cloud Build) enabling rapid code deployment and iteration cycles to production
- Demonstrated full-stack cloud engineering: frontend (Streamlit), backend (Python), cloud infrastructure (GCP), and DevOps (CI/CD)

Media Planning Web App | Incubeta | 2025

- Independently migrated a legacy spreadsheet-based media planning calculator to a cloud-hosted web application with intuitive UI, enabling team-wide access via shared link and eliminating manual distribution of master files.
- Streamlined workflow by centralizing calculation logic and updates in a single production instance, significantly reducing planning cycle time and ensuring consistency across all users.
- Delivered end-to-end ownership from requirements gathering with marketing leadership through design, development, and production deployment.

IT Hardware Procurement System | Engen | 2023

- Facilitated requirements workshops, created UML/BPMN process designs, and presented system enhancement recommendations to business sponsors.

Patient Data Storage Solution | CSIR | 2023

- Designed a central data repository solution for clinical trial data, producing BRDs, process models, and stakeholder presentations.
